Description: EEG vision experiment, looking at blinking lights. Study of how and why peoples’ responses to blinking lights may vary.

- Class Credit: This experiment will give you full COGS17 credit (3 hours) – please let your TAs know that you did this experiment.

- Selection Criteria: 19 yrs old or older. Not colorblind. Normal or corrected to normal vision and hearing. No history of seizures, neurological or neuropsychiatric disorders, or head trauma, please. Not overly sensitive to blinking lights. Glasses ok. If you wear contacts, bring your glasses instead, please.

We need three distinct racial/ethnic groups: African descent, North European (blue-eyed British or Scandinavian) descent, and Korean descent. This means both of your biological parents belong to one of these groups.

Contact: Please send a message one of to the following and we will contact you to enroll in the study:

Janet Shih  <cheerful.sj@gmail.com>
Gopal Kamath  <gkamath@ucsd.edu>

Thank you so much,
